About us

Electralife is Melbourne's leading smart home automation and latest tech specialist. We are trusted in providing technology design and consulting to architects, engineers, and builders alike. Backed by a team of experienced in-house field technicians that install, commission and service our chosen premium new tech products to enhance our client's homes, lifestyles, and businesses.

We're all about the latest, the smartest, and the best. We're continually testing and analysing the latest products to create practical, reliable systems seamlessly integrating with existing tech installations. This applies to our products, our work and our people. We love automation, smart-systems, energy saving and sustainability. Our work is all about designing and building the smartest homes and businesses in Victoria, with the best people.
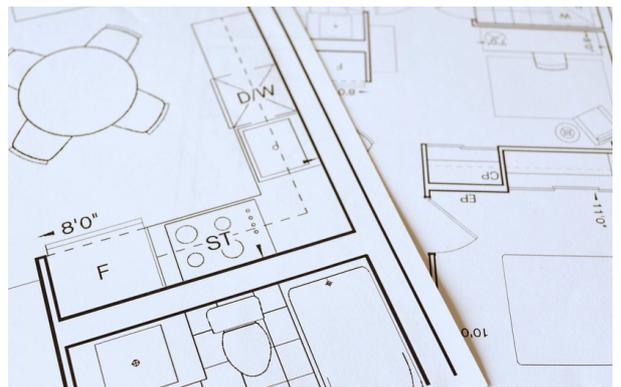

Electralife smart designs are fully integrated buildings; that means we know the products that work and the best methods for installation based on our years of experience on-site. From security systems, to audio visual, to communications, to lighting, we have your design covered with an appropriate budget in mind.

Capabilities

We design:
- CAD mark-ups of existing floor plans
- Wiring schematics
- Data/Server cabinet elevations
- Switchboard elevations
- Security and electronic access control
- Scalable CCTV systems
- Data network and Wifi environments
- Audio, video, presentation spaces
- Lighting control systems
- Automation and BMS control systems

We also offer certified and licensed installation services by our highly trained expert staff.

Your design, assured.

Security and Access Control

Intruder alarm systems, electronic access control and keyless entry are a necessity in today's homes and businesses. Our on-site experience ensures that your system is designed with ease-of-access in mind while maintaining optimal security.

Lighting Control

Our lighting control system designs can cater for any client budget. We specialise in creating easy-to-use systems while maintaining the design quality today's spaces demand.

General Purpose Electrical

From mains power to all general sub-circuits and appliance specific circuitry, we will have real world site conditions in mind. We can offer electrical design, take-offs, switchboard wiring schematics, and cable selection.

Audio Visual

From large entertainment spaces to single AV rooms, we have years of experience that enable us to create stunning AV designs. Acknowledging multi-user ability is key to creating a successful outcome.
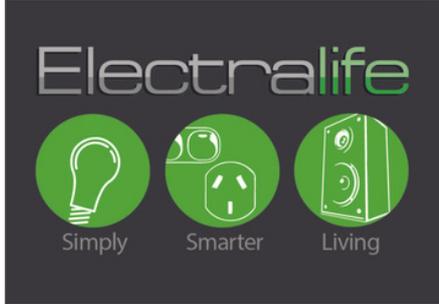

CCTV

We are certified CCTV installers and our in-field experience ensures a quality design. We consider camera placement, lens sizes, overall quantities/coverage, and, of course, client budgets.

Wifi and Enterprise Networks

We are certified enterprise network engineers with years of experience in design and implementing of large-scale data networks. Our important considerations here are user density and building construction; our designs will ensure reliable data networks infrastructure.
